THERMOCOUPLE ATTACHMENT UNIT HM190

The HM190 is a lightweight, hand-held unit using a controlled discharge to attach thermocouple wires directly onto a workpiece surface. The quick pulse ensures accurate and immediate temperature measurement, as the thermocouple makes direct contact at the desired point.

The unit is powered by a rechargeable battery; one full charge enables approximately 250 thermocouple attachments. An attachment-delay function ensures consistent results. The thermal effect on the surface is minimal (typically less than 0.2 mm), and the device can be operated easily with one hand in any position.

The unit is built in a strong plastic housing. Delivery includes a leather carrying case with shoulder strap and an accessory pocket.

TECHNICAL DATA

Model	HM190 GEN2
Connection voltage	100-240 V / 50 Hz
Attachment voltage	34-52 V
Battery	NiMH
Compatible wires	Thermocouple wires dia 0,5 ... 1,0 mm
Function display	Mains, battery condition, charge condition
Dimensions	190 x 135 x 70 mm
Weight	1,6 kg
